ROCKHOLD Q3 2026 INVESTMENT UPDATE

Quarterly market commentary

Third quarter performance was impacted by oil price volatility following the breakdown of the ceasefire between the US and Iran, a cooling of sentiment in the AI spending theme, rotation across industrial sectors and a rapid rise in yields of sovereign bonds.

With Brent crude oil finishing the quarter at over \$100 a barrel, it was unsurprising to see the energy sector deliver double-digit returns. It was interesting to see some reversal of fortunes around the AI spending theme, as following an extremely strong first half of the year, semiconductor stocks suffered double-digit falls. This was mirrored by both the Magnificent 7 and software stocks, which, having struggled due to question marks over their business models as a result of AI spending and usage of the technology, experienced corresponding rises. The high weighting of the Magnificent 7 also meant that this group of stocks alone was pretty much responsible for driving the S&P 500 higher. Conversely, we

saw Emerging Markets decline over the quarter, due to the high concentration of semiconductor manufacturers, such as Samsung, in many indices.

The UK, with its high exposure to oil producers and banks, was one of the best-performing markets, as the latter stand to benefit from higher interest rates. European equity markets lagged, as we saw high inflation, caused by high energy prices, leading to a further rate rise from the ECB. Japan, with its exposure to AI-related hardware manufacturers, performed in line with Emerging Markets, whilst the economy also had to contend with increased volatility in its currency, as political pressure from the US to strengthen the yen increased. Indeed, we saw coordinated action in the currency markets from both the US Treasury and the Japanese Finance Ministry, in an attempt to achieve this, as well as a rate rise to a multi-decade high by the Bank of Japan.

ROCKHOLD Q3 2026 INVESTMENT UPDATE

Whilst we saw mixed performance among equity markets, in global bond markets, the direction of travel was very much universal, as rising bond yields caused bond prices to decline globally. Whilst the moves were universal, they were most extreme in sovereign debt issued by high debt economies such as the US, France and Japan. Yield rises, having previously been limited to longer dated, i.e. 30-year bonds, extended to shorter-term paper, further putting pressure on those governments' finances. Corporate bond yields rose as a consequence, but the premium required by these borrowers only rose slightly, suggesting investors were less concerned about corporations' levels of debt than they were governments.

Given the greater exposure to the US and UK equity markets in higher risk portfolios, these managed to deliver positive returns, but lower risk portfolios struggled due to their higher bond exposure, with the most cautious portfolios ending up in slightly negative territory. However, despite a more challenging quarter, all portfolios remain firmly in positive territory year to date.

ABOUT ROCKHOLD

Rockhold Asset Management is owned by the 7IM Group.

Our portfolios are managed to meet clear and specific mandates for risk and investment outcomes.

We work with partners who are specialists in their field and who follow our approach to investing.

To ensure portfolios have the most appropriate asset class selection we've teamed up with 7IM, who are specialists in strategic asset allocation and have been creating diversified and robust multi-asset portfolios to meet different investors' risk and return profiles since 2002. This adds an additional dimension to our proposition; helping drive positive risk-adjusted returns over the medium to long term.

The Rockhold Investment Committee, made up of experienced industry professionals, regularly reviews each portfolio to ensure that they are performing as expected. The committee retains the power to appoint and replace portfolio managers.

Our portfolios offer:

-  Risk-managed multi-asset portfolios across different risk profiles
-  Clear volatility targets for each risk band
-  A dynamic approach to asset allocation, with a global and forward-looking perspective
-  Fund selection incorporating extensive research analysis

OUR INVESTMENT APPROACH

Investments can be turbulent and when financial markets crash across the globe, it can be frightening. However, a carefully planned investment strategy, put in place with your planner and administered by Rockhold, provides reassurance if this happens.

It is entirely normal for the value of investments to go up and down, and investing money carries the risk that you may not get back the same amount as you put in. The key to successful investment means keeping these normal fluctuations within acceptable limits, so that over the medium to long term, usually 5 years or more, the volatility of the markets has time to recover.

The Rockhold approach to successful investment is held on four principles:

- **CONTROL:** understanding your risk
- **STRENGTH:** dynamic asset allocation
- **AGILITY:** investing in multiple asset classes
- **BALANCE:** a choice of passive and active investments

CONTROL:

UNDERSTANDING YOUR RISK

All financial investments carry an element of risk. While more risky investment strategies can result in greater returns they can also result in greater losses. Less risky strategies are likely to remain more constant, so while not having the same growth potential as more risky strategies they are less likely to result in big falls.

What is crucial is that we correctly identify your risk profile and keep your investments within this.

To do this your adviser will carry out a full assessment. This will consider how long you want to invest for, your aspirations for the future and your attitude to risk; for example, how would you feel if your portfolio decreased by 10%? This will determine a Rockhold portfolio best suited to you.

Rockhold portfolios are designed to work within the risk parameters agreed with you. They are carefully monitored and adjusted to make sure they stay within these limits. So, once you have established your risk profile and chosen a portfolio to match, you can be confident that your investment won't slip into another risk category.

STRENGTH:

DYNAMIC ASSET ALLOCATION

The biggest factor in determining investment returns is asset allocation; that is the way your portfolio is split between stocks, bonds, property, and other asset classes.

Getting asset allocation right needs expert knowledge and judgement. A critical understanding of economics is combined with analysis of financial markets, and this is used to determine the best mix of assets for each portfolio. The portfolios are invested across a wide range of asset classes including UK and international equities, government and corporate bonds, infrastructure, and cash.

Asset allocation is a dynamic process which means that we keep a close eye on current economic conditions and market performance. Each portfolio is reviewed quarterly and where we think a different asset mix would better achieve the investment objectives, we make appropriate adjustments. The asset allocation mix for all portfolios can be found in the latest factsheet provided to you by your adviser.

AGILITY:

INVESTING IN MULTIPLE ASSET CLASSES

By spreading risk, a diverse portfolio held over the medium to long term we believe is the best way to achieve positive, risk-adjusted returns. We do this through managed portfolios as they offer transparency and flexibility and allow us to tailor investment solutions in the most cost-effective way.

Rockhold portfolios are designed to meet a range of needs and objectives and your adviser will help you choose what is right for you. To achieve these investment objectives, we use quantitative and qualitative techniques, that is the numbers and the selection methodology. We also carry out extensive research to shape our macro-economic view.

In addition, within the active and blended portfolios, we maintain a constant exposure to our own multi-asset managed funds, which adds further diversification and risk control, predominately through the funds' ability to hold a wider range of asset classes and funds, as well as our oversight of the funds' investment managers.

BALANCE:

A CHOICE OF ACTIVE AND PASSIVE INVESTMENTS

Passive funds aim to track the performance of an index, for example, the S&P500 or FTSE250; typically, by investing proportionately in all constituents of the index. Because these funds follow performance, they are typically lower cost.

Active funds look to beat the standard indexes by aiming to select investments that will perform well over the medium to long term, keeping within the prescribed volatility limits whilst predominantly investing actively in funds.

While active funds offer the potential of better returns, they demand more expertise and research, and come with the risk of greater losses. For active portfolios, the investment manager will aim to choose funds that will outperform the equivalent index net of charges, over the long term.

Rockhold offer active, passive and blended portfolios to meet a range of investment objectives. Your adviser or financial planner will explain the difference and help you decide which is most appropriate.

OUR INVESTMENT PROCESS

Asset allocation

It is widely recognised that asset allocation is the main driver of investment returns. The Rockhold portfolios are constructed based on a dynamic and global approach to asset allocation.

Key features of this include:

- Putting 'risk first' to ensure portfolios achieve their prescribed risk level and this is maintained over time by regular review and adjustment.
- Within our active and blended portfolios we maintain a constant exposure to our own multi-asset managed funds, which adds further diversification and risk control, predominately through the funds' ability to hold a wider range of asset classes and funds, as well as our oversight of the funds' investment managers. 7IM combine this with applying their investment processes on the remaining allocation.
- A global outlook diversifies the risk of any regional biases.
- Adjusting asset allocation using a quantitative model which incorporates views on the macro- economic outlook, investment fundamentals, technical data and the geopolitical climate.
- Quarterly reviews of the asset allocation model with the flexibility to make any adjustments required.

Fund selection

Once the asset allocation for each portfolio has been established, funds are chosen to populate each asset class.

7IM also undertake research and due diligence for active and passive holdings. This process starts with the universe of collective investment funds in the UK and filters these through several steps including:

- Desk-based quantitative research to scrutinise performance, risk and investment ratios.
- How funds have performed against their investment objectives and in the context of their style and approach.
- Interpretation of results considering market conditions.
- Using market knowledge and contacts to identify new opportunities.
- Fund manager meetings.

INVESTMENT RISK & TARGET MARKET

Investment Risk

Past performance is not a reliable indicator of future results. Investments should be considered over the longer term and should fit in with your overall attitude to risk and financial circumstances. The value of investments, as well as the income from them, can go down as well as up and you may not recover the amount of your original investment.

Target Market

Our portfolios are suitable for all types of retail and professional customers that are receiving advice from a financial adviser. As you will be investing in stock market-based investments, you should be prepared to invest for a minimum of 5 years.

Should the value of your investment go down you should be in a financial position such that this will not have the effect of a reduction in your standard of living. Your financial adviser will determine the most appropriate portfolio based on your risk profile. We do not offer any investments that come with no investment risk or are very high risk.

For our sustainable portfolios they are specifically designed for those investors who wish their portfolio to be managed in sustainable investments. This may result in a different outcome in terms of risk and reward versus a similar portfolio taking a non-sustainable approach.

ROCKHOLD PORTFOLIO PERFORMANCE SUMMARY
